

The Nitric Oxide Rescue Guide

This free guide reveals the 5 warning signs that your nitric oxide levels are critically low, plus 3 simple foods you can eat today to start boosting production naturally.

Why You Need Nitric Oxide

Nitric oxide is the 'youth molecule' your body uses to keep blood vessels open, oxygen flowing, and your brain firing on all cylinders. But by age 70, your nitric oxide levels drop by a whopping 75%. This dramatic decline is the hidden cause behind fatigue, blood pressure concerns, memory lapses, reduced intimacy, joint discomfort, and cold hands and feet from poor circulation.

The MIT Breakthrough That Changes Everything

MIT scientists discovered that nitric oxide production starts in your mouth. The bacteria on your tongue convert nitrates into nitric oxide. That is why CircO2 comes in fast-dissolving lozenges. In clinical testing, this method raised nitric oxide levels 200% within 20 minutes and increased blood flow by 34%.

3 Energy-Enhancing Nutrients

Beet Root Powder for Olympic-level stamina, Hawthorn Berry to enhance absorption, and L-Citrulline which converts to nitric oxide more effectively than L-arginine. Plus Vitamin B12, Vitamin C, and Magnesium to multiply the benefits.

How CircO2 Transforms Your Daily Life

People who take CircO2 report renewed energy and stamina, sharper thinking and recall, healthier blood pressure readings, enhanced mobility and comfort, improved intimacy and performance, more restful sleep, and a sense of youth and vitality.
