

The Nitric Oxide Rescue Plan: 7 Steps to Restore Your Body's Oxygen Flow After 45

A free guide revealing the 7 daily habits that either destroy or rebuild your nitric oxide levels — plus the 2-minute morning ritual MIT researchers say can boost oxygen flow by up to 200%.

The Silent Molecule That Keeps You Young

Nitric oxide is the master molecule your body uses to keep blood vessels open, oxygen flowing, and every organ functioning at peak capacity. It's what gives 20-year-olds their boundless energy, razor-sharp memory, and effortless recovery. But here's the devastating truth: starting around age 45, your nitric oxide production plummets. By 70, you've lost 75% of it. By 80, it's down 85%. That's not aging gracefully — that's your body slowly suffocating at the cellular level.

Why Your Doctor Misses It

Your doctor can measure your blood pressure, your cholesterol, your blood sugar. But almost no one measures your nitric oxide levels. So you get told you're 'fine' while you feel yourself declining year after year — the afternoon fatigue, the 'senior moments,' the creeping blood pressure readings, the reduced intimacy in the bedroom. These aren't just 'part of getting older.' They're symptoms of oxygen starvation in your tissues.

The Problem With Most Nitric Oxide Supplements

Here's what the supplement industry doesn't want you to know: most nitric oxide products use L-arginine. And clinical studies show L-arginine loses up to 75% of its potency during digestion. Worse, after age 45, your body struggles to convert L-arginine to nitric oxide at all. So you're swallowing expensive pills that your body can't even use. It's like trying to fill a car's gas tank by pouring fuel on the hood.

The MIT Discovery That Changed Everything

MIT scientists discovered that nitric oxide production doesn't start in your stomach — it starts in your mouth. The bacteria on your tongue convert dietary nitrates into nitric oxide as the very first step. That's why CircO2 comes as a fast-dissolving lozenge. You place it on your tongue, and within minutes it kickstarts nitric oxide production exactly where it needs to begin. In clinical testing, this method raised nitric oxide levels 200% within just 20 minutes and increased blood flow by 34%. No pill or capsule can achieve these results.

What CircO2 Does for Your Body

CircO2 combines Beet Root Powder (used by Olympic athletes for stamina), Hawthorn Berry (centuries-old heart support that enhances absorption), and L-Citrulline (which converts to nitric oxide far more effectively than L-arginine, especially after 45), along with Vitamin B12, Vitamin C, and Magnesium. The result? Renewed energy and stamina to stay active without afternoon crashes.

Sharper thinking and recall — remember names, where you put things, and maintain your mental edge. Healthier blood pressure readings that will impress your doctor. Enhanced mobility and comfort as your joints receive more oxygen. Improved intimacy and performance through better blood flow to every area of your body.
