

5 Blind Spots Burglars Look For Before They Break In

A free checklist walking through the property blind spots most homeowners overlook — entry points, sightlines, and low-cost fixes you can make this weekend.

Why Traditional Alarm Systems Fail When You Need Them Most

Standard home security systems cost \$2,000-\$3,000, depend on the power grid, and can be disabled by simply cutting a wire. During widespread emergencies — storms, blackouts, civil unrest — that's exactly when they go dark. A layered, battery-independent system closes that gap.

Layered Protection, Not Just One Alarm

The kit combines an early-warning perimeter tripwire, two all-angle motion sensors, four stealth door/window alarms, a wedge-style alarmed door jammer, and a solar floodlight shaped like a security camera. Each layer buys you more warning time before an intruder ever reaches your door.

Built for Real Situations, Not Just Theory

The included Home Defense Guide covers property blind-spot audits, situational awareness tactics, and practical steps for securing a home during extended power outages — the kind of preparation that matters when normal services are unavailable.
