

5 Overlooked Vulnerabilities Looters Look For (And How to Fix Them in 1 Hour)

A free printable checklist walking you through the exact blind spots a former CIA officer says looters scan for first — and simple, low-cost fixes for each one.

Why Most Home Security Fails When You Need It Most

Cameras need WiFi. Alarms need power. Monitoring services need phone lines that work. During blackouts, storms, or civil unrest, the systems homeowners pay hundreds a month for simply go dark — right when the risk is highest.

A Layered Approach, Not a Single Gadget

The kit combines motion sensors, a perimeter tripwire alarm, a wedge-style door jammer alarm, and a solar-powered floodlight into one system. Each layer buys you more warning time and makes your home a harder, less appealing target.

No Subscriptions, No WiFi, No Monthly Fees

Everything runs on batteries or solar power and needs zero internet connection to function — so it keeps working exactly when cloud-connected systems stop.
